

The Best and Latest in Green Plumbing Solutions

Today's "green" plumbing solutions have a lot to offer. The staff at The Lunt Marymor Company has dedicated themselves to discovering the most efficient and comfortable products available. To do this, we literally "field test" each of these products in our office and in our homes before we recommend them to our clients. We pass showerheads around from one plumber to another for use at home, and we have a constantly changing high-efficiency water closet model installed in our staff bathroom - we're looking for products that perform well and that we like to use.

Splinter Group members of long standing, Jim Lunt and Leigh Marymor, will share their experience with high efficiency hot water heaters, tankless hot water heaters, on-demand hot water re-circulation systems, high efficiency technology (HET) water closets, low-flow showerheads and more.

Please save the date and join us.
